

College Office: Role Flow

Source: *navConfig.ts*, *src/proxy.ts* and *src/app/(dashboard)/college-office/*** (pages and the API calls they make). Built from the pages and menu; the API guard on every route was not individually audited, so treat the Can/Cannot column as what the screens offer.

1. In one minute

The College Office is the **records desk of one college**. It enrolls and maintains **students**, keeps **non-technical staff** records, and runs the **paperwork end of hiring** (offer letters, appointment letters, faculty login and official e-mail requests). It also keeps the college calendar and attendance data: **holidays, semester timings, exam rooms, leave history, staff attendance and student attendance reports**. It does not approve hiring, leave or budget; those decisions belong to the Principal.

2. Start point

- Login with email and password (Firebase Auth). *POST /api/auth/session* checks the token and sets the signed 24-hour cookie *fms-session*.
- Browser opens **/college-office**. *proxy.ts* lets this role open only */college-office/** plus shared pages: panel interviews, evaluation, candidate profile and leave adjustments.
- The College Admin login also has College Office as its primary role, so it sees this whole section. Its personal items (My Profile, My Leave, Adjustment Requests, My Attendance) are hidden.

3. Dashboard (/college-office)

Greeting "Hello, name", a personal overview, then three tiles: **Sent to Accounts** (candidates at the decision stage, opens Candidates), **Students** (add, view or remove) and **Faculty**. Below is the list **Recently Sent to Accounts**. The Super Admin can hide any tile or menu item per college.

4. Menu and what each page does

Section	Page	What the Office does there
Students	Students (/students)	Roster of students with Academic Year / Course / Department filters. Add, edit, delete, bulk delete, bulk-create logins, open a student's documents. Tabs include Graduated students.
	Import Students	Bulk Excel import. Roll No optional; Student Mobile No required and unique across all colleges.
	Semester Timings	Per department / course / year semester dates; edit a year's timings.
Staff	Non-Technical Staff	List, add (/new), import, view profile, edit by module, create login, set credentials, delete record.
	Faculty	View faculty list and a person's profile; promotion / salary page per faculty.
	HOD / Principal	View the HOD and Principal list; promotion / salary page per person.
Hiring	Hiring Pipeline	Tracks vacancy requests, hiring batches, candidate applications and faculty account requests (read-through view).
	Candidates	Candidates at the decision stage with offer and account-request status.
	Offer Letters (/offers)	Shows offers; mark an offer Rejected; see whether the Principal has generated the appointment letter and whether the candidate confirmed a joining date.
	Faculty Credentials	Raise the request for a new faculty login and check an official e-mail is free. The Webmaster creates the account.

Section	Page	What the Office does there
	Official Emails	Request an official e-mail address, cancel a pending request.
	Documents	Hiring documents by department, vacancy and candidate.
Leave & Attendance	Leave History	Per department and person leave history, who is absent today, import history.
	Leave Profiles	View and edit each person's leave profile / balances.
	Holidays	Holidays, summer holidays and working-day overrides; add, import, remove.
	Exam Rooms	Add, edit, delete rooms; bulk add from Excel.
	Staff Attendance	Staff attendance per person.
	Import Attendance	Upload past attendance history.
	Attendance Reports	Student attendance reports with filters, view only for the whole college.
Personal	My Profile / My Leave / Adjustment Requests / My Attendance	The Office member's own profile, leave, cover requests and check-in.

5. Main flows

5.1 Enrol students

1. Open Students and press Add, or Import Students and upload the Excel file.
2. Enter or import the details. Student Mobile No is required (10 digits starting 6-9) and claimed globally; Roll No may be blank and added later.
3. System claims the mobile (and roll if given) so no other student in any college can reuse it.
4. Optionally bulk-create logins. This needs a roll number; roll-less students are reported per row.
5. Later edits, documents and deletion are done from the same list. Graduated students move to the Graduated tab.

5.2 Hiring paperwork (after the Principal decides)

1. HOD raises a vacancy and the Principal approves it; interviews and the decision happen upstream.
2. A selected candidate appears in Candidates ("Sent to Accounts") and in Offer Letters.
3. Office follows the offer: it can mark an offer Rejected; otherwise it waits for the candidate to accept and confirm a joining date.
4. The Principal generates the appointment letter. Until then the Office actions that depend on it stay disabled.
5. Office raises the Faculty Credentials request and the Official Email request. The Webmaster creates the login.
6. Once the faculty record exists the person is managed under Faculty.

5.3 Non-technical staff

Add (or import) the record, fill profile modules, press Create login account when the person needs to sign in, set credentials from the staff page. Deleting a record asks for confirmation.

5.4 Calendar and attendance upkeep

Set Holidays and working-day overrides, set Semester Timings per course and year, keep Exam Rooms current, import past staff attendance, and read Attendance Reports and Leave History when asked.

6. Notes

- Hiding a menu item is not security; each API route guards itself.

- A login linked to a RESIGNED or RETIRED faculty record becomes read-only (see CLAUDE.md).
- The Supporting-staff split (Technical to HOD, Non-Technical to College Office) is a deliberate product decision; do not change it casually.
